

Gaming Social Platform

Requirements & MVP Scope Selection Document

Purpose: This document breaks the proposed platform into functional modules so the project owner can identify which features are required for the initial MVP and which can be moved to later development phases.

1. Product Overview

A modern gaming social platform initially connected to a Minecraft server/ecosystem, with an architecture designed to support additional games and servers such as Roblox, Hytale, FiveM, Rust and CS2 in future phases.

The intended product combines a gaming social network, competitive statistics platform, game/server discovery and ranking platform, tournament system, community forum and charity/impact hub.

2. Core Platform & User Accounts

- MVP: Registration/login; email verification; user profiles; avatar, username and bio; connected game accounts/UUIDs; account settings; profile privacy; roles/permissions; basic notifications.
- Later: Multiple authentication providers; advanced account linking; advanced privacy controls.

3. Gaming Integration & Player Statistics

- MVP: Minecraft as initial supported game; Minecraft account/UUID linking; available player statistics; game profile; basic achievements/badges; activity history; game-specific statistics.
- Later: Roblox, Hytale, FiveM, Rust and CS2 integrations; advanced automatic synchronization for each game.

4. Leaderboards & Rankings

- MVP: Global leaderboard; game-specific leaderboard; basic player ranking; ranking based on selected statistics.
- Later: Multiple ranking categories; seasonal rankings; server-specific rankings; advanced ranking algorithms.

5. Gaming Server Directory

- MVP: Server listings; server profile; description; game/category; rules; screenshots; player count; join link/IP; basic ratings; search/filter.
- Later: Reviews; advanced server rankings; trending servers; detailed analytics; automated server monitoring.

6. Tournaments

- MVP: Tournament creation; upcoming/past tournaments; tournament details; registration; teams/participants; basic brackets; results; winner display.
- Later: Automated brackets; automated game-result integration; prize management; tournament statistics; player tournament history; advanced tournament administration.

7. Teams / Clans / Guilds

- MVP: Create team/clan; team profile; members; basic statistics; team ranking.
- Later: Recruitment; applications; tournament history; advanced roles/permissions; team achievements.

8. Social Network

- MVP: Friends/follows; social feed; posts; image/screenshot uploads; likes/reactions; comments; basic activity feed.
- Later: Advanced feed algorithm; sharing/reposts; mentions; hashtags; rich media.

9. Community Forum

- MVP: Forum categories; threads; replies; reactions; user profiles; basic moderation.
- Later: Advanced moderation; reputation system; advanced search; moderator workflows; forum badges/ranks.

10. Messaging & Notifications

- MVP: Friend/follow notifications; system notifications; basic private messaging.
- Later: Real-time chat; group conversations; read receipts; typing indicators; media/file sharing.

11. Impact Points & Charity

- MVP: Impact Points linked to global account; point balance; earning history; basic history; point allocation to charity causes; charity/cause profiles.
- Later: Detailed charity dashboards; fundraising progress; sponsors/partners; influencer donations; community impact statistics; advanced allocation tracking; automated charity integrations.

12. Player Progression & Rewards

- MVP: Player levels; basic ranks; achievements; badges; basic rewards.
- Later: Seasonal progression; advanced rewards; XP system; seasonal leaderboards; battle-pass-style progression.

13. Events / Calendar

- MVP: Event calendar; tournaments; server events; community events.
- Later: Charity events; recurring events; RSVP; reminders; advanced event management.

14. News / Blog / Announcements

- MVP: News/announcement section; admin-created posts; categories; basic publishing.
- Later: Full CMS; author profiles; scheduled publishing; featured/trending articles.

15. Search

- MVP: Search for users, servers, teams and tournaments.
- Later: Forum search; advanced filters; search ranking; full-text search; recommendations.

16. Admin & Moderation

- MVP: Admin dashboard; user management; content moderation; server management; tournament management; forum moderation; basic reports; ban/suspend users.
- Later: Advanced analytics; automated moderation; audit logs; advanced reporting; multiple moderator levels.

17. UI / UX & Responsive Design

- MVP: Modern gaming/social-platform interface; desktop and mobile responsive layouts; consistent design system; dashboard/profile layouts.
- Design direction: The product should feel like a gaming social network and competitive platform rather than a traditional corporate website.

18. Recommended MVP Package

Area	Recommended MVP Scope
Core	Accounts/authentication; user profiles; Minecraft account linking; basic notifications
Gaming	Minecraft integration; player statistics; achievements/badges; basic activity history
Competition	Global/game leaderboards; basic server directory; server profiles; basic tournaments; basic teams/clans
Social	Friends/follows; social feed; posts; comments/reactions; basic private messaging
Community	Forum; categories; threads; replies; basic moderation
Impact	Impact Points; point history; charity causes; basic point allocation
Platform	Events/calendar; news/announcements; search; admin/moderation dashboard; responsive UI

19. Phase 2 / Future Scope

- Additional game integrations: Roblox, Hytale, FiveM, Rust and CS2.
- Advanced game-specific statistics and automated synchronization.
- Advanced server monitoring, rankings and analytics.
- Advanced tournament automation, results and prize management.
- Advanced team recruitment, permissions and competitive history.
- Real-time/group messaging and richer social-media functionality.
- Advanced charity/fundraising dashboards and integrations.
- Advanced progression, seasonal systems and rewards.
- Advanced analytics, moderation and search/recommendation systems.

20. Technical & Scope Dependencies

- Game/server integrations depend on the availability, reliability and permitted use of official or third-party APIs, server plugins and data sources.
- Live player statistics, server player counts, achievements, automated tournament results and similar data may require custom server-side integrations.
- Third-party service fees, hosting, domains, paid APIs, game/server services, payment gateways and other external costs should be treated separately unless explicitly included.
- Final development cost and timeline should be determined after the project owner confirms the MVP scope and the technical requirements for each integration.
- The platform should use modular architecture so additional games and features can be added without rebuilding the core system.
